Advanced NMEA Data Logger is an application for recording device activity to your computer and storing this information in Excel spreadsheets, Access files and other databases. Advanced NMEA Data Logger Features: Record device activity to your computer. Automatically save data in Excel, Access or other databases. Detailed information with access to individual logs. Records NMEA data of all the connected devices. Select from a list of supported input protocols. Automatically generate input files. Built-in parser for NMEA log data. Simple configuration. Client and server installation. Multiple connection modes. Supports NMEA data of various NMEA devices. Multi-lingual interface. Customizable language. Copy log data to clipboard or save it to a file. Drag and drop logging. Active and inactive monitoring. Export the configuration to a.INI file for future use. If your NMEA devices are connected to multiple computers and applications you can also use the Advanced NMEA Data Logger online services, which you can log from multiple computers through just one account. Advanced NMEA Data Logger is a suitable tool for recording the activity of remotely connected NMEA devices and saving it in Excel spreadsheets, Access files and other databases. The application can provide you with real-time data from any of the supported devices and instruments. With Advanced NMEA Data Logger you can record and aggregate data from several NMEA devices to your computer. The program can thus replace hardware equipment that logs data from GPS devices. Simple management of the devices' status. You can monitor a device as a client or server station, based on which computer the program is installed on. Advanced NMEA Data Logger provides a smart interface for obtaining the status of the device. You can provide dynamic and extensive information to the application, such as display name, serial number, the most recent log, or even the last errors reported by the hardware device. Select one of the supported input ports and you can specify the data format to be received. You can log the following types of data and use them for your data processing: latitude, longitude, and altitude; UTC, or Universal Coordinated Time; course, speed, and battery voltage; or registered time, speed, course and battery voltage. You can log the data as column or row values or as binary data. All the data that the device outputs is saved

Advanced NMEA Data Logger For Windows 10 Crack is a powerful application that can record activity logs from various devices remotely connected via TCP/IP protocols or COM ports. The tool is designed to input NMEA data streams from GPS, navigation and other similar instruments. Input data from NMEA devices to local files Advanced NMEA Data Logger is a suitable tool for recording the activity of remotely connected NMEA devices and saving it in Excel spreadsheets, Access files and other databases. The application can provide you with real-time data from any of the supported devices and instruments. NMEA or National Marine Electronics Association represents a specification for the interface between pieces of marine electronic equipment. The data transfer between an electrical interface and the communications protocol can, for instance, be defined by the NMEA standard. Advanced NMEA Data Logger can record and aggregate data from several NMEA devices to your computer. The program can thus replace hardware equipment that logs data from GPS devices. Quick device configuration Advanced NMEA Data Logger allows you to easily configure the NMEA devices you wish to monitor and allows you to select between the supported port types during the installation. You can select the RS232/RS485/RS422 port configuration, which you can log through a converter. Alternatively, the program can listen to TCP/IP or UDP ports. The configuration window includes several categories regarding the devices, the log files, the data format and plug-ins. You can monitor a device as a client or server station, based on which computer the program is installed on. Server and connection settings Advanced NMEA Data Logger allows you to filter the IP addresses that you wish to listen to. Leaving the list empty implies that you wish to allow all connections. Moreover, you can specify the number of simultaneous connections and enable the option to send client information to a parser. Working with advanced messages like NMEA 2000 format or a remote reading of NMEA 2000 compatible devices is possible. The tool provides a lot of scope in helping you to review logging data and find time stamps for variable or fixed information. NMEA or National Marine Electronics Association represents a specification for the interface between pieces of marine electronic equipment. The data transfer between an electrical interface and the communications protocol can, for instance, be defined by the NMEA standard. Advanced NMEA Data Logger can record and aggregate data from several NMEA 09e8f5149f

What's New in the Advanced NMEA Data Logger?

Advanced NMEA Data Logger (ADL) is a free, easy to use utility that records NMEA data from multiple NMEA devices to a single output. You simply point ADL to the servers, GPS receivers and other NMEA-equipped devices, and connect the output device to the computer using the ADL software. An easy to use interface allows you to configure the devices and specify data output. ADL has a built in server mode that allows you to listen to any number of servers. ADL is completely free of charge and available for download from the internet. Advanced NMEA Data Logger (ADL) is a free, easy to use utility that records NMEA data from multiple NMEA devices to a single output.
