of the Invention The present invention relates to a drive circuit  
of a display panel, more particularly to a drive circuit capable  
of suppressing interference on data lines. 2. Description of the  
Related Art Referring to FIG. 1, a conventional drive circuit 10  
includes a delay circuit 11, a source driver 13, a timing  
controller 15, and a display panel 17. The delay circuit 11  
receives a picture signal DATA from a picture signal input  
terminal 1 for generating a plurality of shift signals SRH in  
response to the picture signal DATA. The source driver 13 is  
electrically connected to a plurality of data lines DL for driving  
data lines in response to the plurality of shift signals SRH. The
