I am using Windows 10 Pro x64. I tried to install the new Altium latest version, but I got the following error: Can anyone help me with this issue? A: What version of Altium do you have? The screenshot you provided, shows a program designed for Altium v18.x or earlier. You should have updated to v19.x/20.0.x at the very least. I would suggest installing the latest version, not the.iso. There is a link posted here on how to do that. Robot-assisted laparoscopic radical prostatectomy: initial clinical experience. The feasibility and safety of robot-assisted laparoscopic radical prostatectomy (RARP) in patients with localized prostate cancer has been established in several recent studies. These are promising initial results, but there is still a considerable learning curve, and the procedure requires advanced robotic skills. In this retrospective study we evaluated the outcomes of this technique. Between February 2006 and May 2007 we performed RARP on a total of nine patients (mean age: 62.6 years, mean prostate specific antigen: 7.2 ng/ml). The majority of procedures were performed

by the staff surgeon in our institution (four of nine). Robotic surgical skills were obtained during a training period (12 cases). A total of five cases were performed by two additional surgeons with minimum robotic experience. The mean operative time was 210 minutes (range: 196-240), blood loss was 100 ml, and the mean hospital stay was 7.3 days. No intra- or postoperative complications were noted. Histopathological examination revealed an average tumor volume of 41.1 cm³. The mean postoperative follow-up period was 17.2 months (range: 15-20). During that time there were no peri- or postoperative complications, and the maximum urinary flow rate was 17.3 ml/s. Our preliminary results show that RARP is feasible, safe, and reproducible. A short learning curve and detailed operative technique are prerequisites for a positive outcome. If the technical requirements are met, RARP can be an alternative to laparoscopic radical prostatectomy. Intriguingly intriguing: mTOR inhibitor
