The history of Photoshop Color Theory Photography Basics Photoshop Elements The comparison What Is Photoshop? Adobe Photoshop has been around since 1993, when it was first released for the Mac OS. The application was soon adopted by many corporations and photographers worldwide. Introduced in 1988 for the Apple Macintosh, Photoshop quickly became the choice of numerous professional graphic designers and photographers. The Mac version was released in 1989 and many of the core features remained the same. A beta version was released for the Windows operating system in 1991 and the company's roots lay there. In 1996, it was released for the first time as a stand-alone product for Windows, following the growth in popularity of the Internet. Not a Copy or Clone Originally, you could only create a copy of an original image or layer. Over time, the newer toolset of Refine Edge and Content Aware tools allowed you to make quick adjustments and edits to an original image without having to do any work. A true clone tool was not invented until 2005. You can use the Photoshop Clone Stamp tool to make adjustments and edits to your images. However, you can also use this tool to create a photo collage or some other project. The History of Photoshop In 1993, Photoshop Creator was introduced. It allowed customers to design and distribute their own logos. Photoshop Lightroom 1 was introduced in 2007. Photoshop CS came to the market in 1992 and replaced Photoshop 2. Photoshop CS became a one product company in 2008. Photoshop CC was released for the first time in 2012 and is fully integrated into the Creative Cloud. The history of Photoshop is a continual cycle of improvements and innovations that keep it at the forefront of image editing and manipulation programs. Photoshop CC is the most recent product that has incorporated these improvements. Developed in the early nineties, Adobe Photoshop 1.0 was released for the Macintosh in 1995. You can have a Trident format only image, a display or clipboard format, or a link to another file or location. Your display format images can have a transparent background and they can be colour or grayscale. You can also add text to your images. Because the Trident bitmap format is more efficient than JPEG and GIF, it is used to create images for websites and for commercial use. PNG Free Images in PNG format can use transparent backgrounds and they can be colour or grayscale. Because PNG is an open standard, it is not a proprietary format and most web browsers can display PNG images. PNG images also support compression and for this reason they can be smaller than JPEG and GIF. . Q: How to store user sign-in credentials in api access backend I am creating an application where the user needs to sign in using credentials they have provided. The credentials are stored securely in the user's machine. I am not storing the passwords in a database as it is not recommended. I don't need the credentials to be stored by my application. What I want is a way to store these credentials so that the endpoint can validate them when the user attempts to access the API. What I am thinking of is using Google OAuth for authentication and storing the refresh token(s) in the API access backend. I am just not sure if there is a better way to do it? A: You can create a oauth2 token the user can use to exchange their google credentials for a refresh token which you can use to reauthenticate them. Although with google this would be easiest to use their own oauth2 server. There is some useful information on how to do that here Q: Getting an array of values with jquery I'm new to the.length property of an object. I have a friend object array in which I want to show some of the items in the Friend Class. So basically I want to retrieve the value of the name property from each object in the array. My Friend class object looks like this: public class Friend { public int UserID { get; set; } public string[] Name { get; set; } } How do I access the Name property? I get the friend list from a database and I want to display the name field of the Friend class. I can get the list of friends from the database using: Friend[] newFriends = new Friend[] { //Friend.Friends }; dataproduct.DataSource = newFriends; dataproduct.DataBind(); But what is the next step? Thank you! A: The following code would be read more like "find the names of the friends": var names = dataproduct.DataSource

James Tyrone Johnston James Tyrone Johnston (17 December 1914 – 7 August 2001) was a British author and journalist, best known for his travel books. Life Johnston was born in Mexborough, Derbyshire to a Yorkshire-based family, the son of Presbyterian missionaries and author and former President of the Methodist Conference James Johnston and wife, the Swiss art historian Mary Nicholas Johnston. After a period at Cheltenham College, where he met his future wife, Hilda, he studied at Magdalen College, Oxford, where he took a degree in English literature. He was university editor of the Oxford University List and a member of the Oxford Union. After graduating he joined The Times as an assistant to the second leader, James Cameron. He then became an assistant editor of The Times Literary Supplement, from which he resigned in 1938 to start his own literary magazine, the Oxford University List. Johnston enlisted in the Royal Air Force at the outbreak of World War II, and was commissioned as a pilot officer on the General List. In September 1940, he applied for a short service commission as an air vice marshal. The application fell through, and he was instead posted to 92 Squadron, where he served as a ferry pilot, ferrying Beaufort bombers between Scotland and an airfield in South Africa. In February 1942, he was one of eight pilots who took a Sunderland flying boat, piloted by Billy Sedge on a lengthy reconnaissance flight in southern Africa. He continued flying until the end of the war. He was present at the surrender of Italy. After the war, he worked as an editor of The Times Literary Supplement, and was a founding editor of the travel magazine, English-Speaking, an organisation he led from 1952 until 1983. He also wrote travel books. For the Arts Council of Great Britain, he wrote an account of the first two International Festivals of Modern Dance. He worked for the Arts Council on a number of other projects. He wrote the book for the First Festival of the International Theatre Institute, and he was on the committee to reform the annual Burning Bush Music Festival. He was chairman of English-Speaking from 1975 until its merger with French-Speaking in 1983. He wrote the report for the Second Festival of the International Theatre Institute. In 1977, Johnston was appointed as chairman of English-Speaking, succeeding the writer Nancy Mitford and serving for eight years. He was associated with The Oxford English Dictionary from the 1950s.
