This article describes the problem of using C:\ProgramData\ and the steps to correct it. The procedure described includes many pitfalls which I hope to avoid for the future and also prevents problem recurrence. Problem: C:\ProgramData is missing on all systems Symptoms: When a user logs on to Windows with C:\ProgramData as the default working folder, the user is redirected to a set of folders. When some programs try to use the default C:\ProgramData folder and fail, the C:\ProgramData folder is visible in Explorer, but only empty. Some programs that use the default C:\ProgramData folder work properly; other programs try to use the C:\ProgramData folder and fail. Cause: The problem results from too many programs running with limited rights on a particular volume. If such a situation exists, C:\ProgramData is not visible in Explorer. This results in users being redirected to a C:\ProgramData folder which may or may not contain useful data. Solution: The easiest solution is to reset the default drive to a system drive or other drive of the user's choosing, for example, the WinNT compatible ATA drive. Another way to locate C:\ProgramData is to open the command prompt and type the following: D: - This will locate C:\ProgramData. NOTE: Although the problems listed here only affect C:\ProgramData, the problems can occur in any particular folder such as the My Documents folder, but the solution is very similar and can be applied. Problem: Programs that use C:\ProgramData fail Symptoms: When a program uses C:\ProgramData as its default folder, it will work as expected. When the folder is not visible in Explorer, the program will fail and report an error such as "The folder 'D:\ProgramData' does not exist or path not found". Cause: Programs that use C:\ProgramData for an application folder are able to use the folder, but are unable to store any data in it. The reason is that the system does not allow a program to access a folder that it does not have the C:\ProgramData folder. Programs that use C:\ProgramData for a shortcut or desktop icon are also affected. Solution: There are two solutions for this problem. Firstly, follow the solution given above. This may fix the
