
Amped Five Software ((EXCLUSIVE))

amped five is one of the best forensics software application that i have used. the software takes the analyst through the analysis process in an intuitive and easy to follow manner. the forensic investigator can access the tools and filters and perform the analysis with no difficulty. richard w. gaskin, president, gaskin forensic services when i compare amped five to other products, the number one thing that makes amped five stand out is the fact that it is an all-in-one application. there are no "specialized" tools that are only in amped five. with other applications, it can be very difficult to get all of the tools into the image and even harder to integrate them into the workflow process. frank l. schenk, chief technology officer, global imaging solutions, llc forensic video processing is a specialized area of digital image processing. its primary aim is to detect changes that have been made to a video clip. in the process, changes can be detected whether they are in the image itself or in the associated metadata. there are a number of commercial and open source video processing software products available for forensic video analysis. the key differences between these products are performance and features. forensic video analysis is primarily concerned with 'change'. this means that it is mainly concerned with change detection. it is not concerned with the detailed analysis of video. it is also not concerned with the temporal (time) aspect of video. forensic video analysis concerns itself mainly with time-stamped video frames. it does not concern itself with time-critical video (video that needs to be played back as fast as possible).

Amped Five Software

i am a forensic video examiner. i have tried several other products in the past, and finally found a product that i can recommend wholeheartedly to anyone working in the area of forensic video analysis. [...] amped five is an extremely powerful tool. i have been using amped five for over a year now, and have found it to be the most powerful, useful, feature-rich, reliable and user-friendly product i have ever used. i amped five is the best product for this particular purpose i have ever encountered, and i use it on a daily basis. this is the first software that i used that actually shows the actual times and timestamps of the video frames. [...] i am really impressed with the way you can control all the settings of the video. i think it is very important to keep the set of tools for processing video and access to this software as simple as possible. dr. marcin rol, warsaw metropolitan police i used amped five to analyze the data that was captured by a portable wireless dvr that was not initially configured for forensic capture. i was able to extract more than 50 hours of video and the results were astounding. i was able to determine that the video was not altered because it was an original video that was captured by a dvr running the windows ce operating system, but the dvr was not configured to record in the forensics mode. amped five has given me the opportunity to be able to analyze and confirm that the digital evidence is unaltered because the source material, the original video, was captured in the forensic mode. amelia san roman, bexar county, texas, public defender 5ec8ef588b
